**1.9 Sqrt Tricks [8 lines] - 6b5387c8**

- Size of the block is not always Sqrt, adjust it as necessary. if  $O(n/b+b)$  then take  $n/b = b$  and calculate  $b$ .
- MO's Algorithm  
\*it is possible to solve a Mo problem without any remove operation. For L in one block R only increases, for every range we can start L from the last of that block
- Sqrt Decomposition by time of queries.  
\*keep overall solution and  $\sqrt{n}$  updates in a vector and for a query iterate over all of them, when the vector size exceeds  $\sqrt{n}$  you can add these updates with overall solution using  $O(n)$
- If sum of N positive numbers are S, there are at most  $\sqrt{S}$  distinct values.
- Randomization
- Baby step, giant step

### 3.3 Flow [6 lines] - fa60fe03

Covering Problems:

- > Maximum Independent Set(Bipartite): Largest set of nodes which do not have any edge between them. sol: V-(MaxMatching)
- > Minimum Vertex Cover(Bipartite): -Smallest set of nodes to cover all the edges -sol: MaxMatching
- > Minimum Edge Cover(General graph): -Smallest set of edges to cover all the nodes -sol: V-(MaxMatching) (if edge cover exists, does not exist for isolated nodes)
- > Minimum Path Cover(Vertex disjoint) DAG: -Minimum number of vertex disjoint paths that visit all the nodes -sol: make a bipartite graph using same nodes in two sides, one side is "from" other is "to", add edges from "from" to "to", then ans is V-(MaxMatching)
- > Minimum Path Cover(Vertex Not Disjoint) General graph: -Minimum number of paths that visit all the nodes -sol: consider cycles as nodes then it will become a path cover problem with vertex disjoint on DAG

```

### 4.2 Points to be noted [14 lines] - 69c18f5f

>[First Write a Brute Force solution]  
>Nim = all xor  
>Misere Nim = Nim + corner case: if all piles are 1, reverse(nim)  
>Bogus Nim = Nim  
>Staircase Nim = Odd indexed pile Nim (Even indexed pile doesnt matter, as one player can give bogus moves to drop all even piles to ground)  
>Sprague Grundy: [Every impartial game under the normal play convention is equivalent to a one-heap game of nim]  
Every tree = one nim pile = tree root value; tree leaf value = 0; tree node value = mex of all child nodes.  
[Careful: one tree node can become multiple new tree roots(multiple elements in one node), then the value of that node = xor of all those root values]  
>Hackenbush(Given a rooted tree; cut an edge in one move; subtree under that edge gets removed; last player to cut wins):  
Colon:  $//G(u) = (G(v_1) + 1) \oplus (G(v_2) + 1) \oplus \dots [v_1, v_2, \dots \text{are children of } u]$   
For multiple trees ans is their xor  
>Hackenbush on graph (instead of tree given an rooted graph):  
fusion: All edges in a cycle can be fused to get a tree structure; build a super node, connect some single nodes with that super node, number of single nodes is the number of edges in the cycle.  
Sol: [Bridge component tree] mark all bridges, a group of edges that are not bridges, becomes one component and contributes number of edges to the hackenbush. (even number of edges contributes 0, odd number of edges contributes 1)

## 8.2 Bit Hacks [51 lines] - 15b43442

```

#define ckbit(n, k) ((n) & (1LL << (k)))
#define toggle(n, k) ((n) ^= (1LL << (k)))
#define setbit(n, k) ((n) |= (1LL << (k)))
#define unsetbit(n, k) ((n) &= ~(1LL << (k)))
#define lowbit(n) ((n) & -(n))
#define highbit(n) (63 - __builtin_clzll(n))
// ----- Iterate Submasks (non-zero) -----
#define ForSubmask(s, m) for (ll s = (m); s; s = (s - 1) & (m))
// ----- Iterate Supersets of m inside [0, 1<<n) -----
#define ForSuperset(s, m, n) for (ll s = (m); s < (1LL << (n)); s = (s + 1) | (m))
// ----- Gosper's Hack | next mask with same popcount
-----
```

```

inline ll NextCombination(ll x){
    ll u = x & -x;
    ll v = x + u;
    return v + (((v ^ x) / u) >> 2);
}

```

### XOR Properties

```

a | b = a ^ b + a & b
a ^ (a & b) = (a | b) ^ b
b ^ (a & b) = (a | b) ^ a
(a & b) ^ (a | b) = a ^ b

```

### Addition

```

a + b = a | b + a & b
a + b = a ^ b + 2(a & b)

```

### Subtraction

```

a - b = (a ^ (a & b)) - ((a | b) ^ a)
a - b = ((a | b) ^ b) - ((a | b) ^ a)
a - b = (a ^ (a & b)) - (b ^ (a & b))
a - b = ((a | b) ^ b) - (b ^ (a & b))

```

### Precompute XOR from 1 to n

```

ll prexor(ll n){
    if (n % 4 == 0) return n;
    else if (n % 4 == 1) return 1;
    else if (n % 4 == 2) return n + 1;
    else return 0;
}

```

### Bit Hacks

```

# x & -x is the least bit in x.
# iterate over all the subsets of the mask
for (int s=m; ; s=(s-1)&m) {
    ... you can use s ...
    if (s==0) break;
}

```

```

# c = x&-x, r = x+c; (((r^x) >> 2)/c) | r is the
next number after x with the same number of bits set.
# __builtin_popcount(x) //number of ones in binary
__builtin_popcountll(x) // for long long

```

```

# __builtin_clz(x) // number of leading zeros
__builtin_ctz(x) // number of trailing zeros, they
also have long long version

// __int128 for 128 bit integer operations

            return false;
        v=next[c][v];
    }
    return(endmark[v]>0);
}
};

```

## 9.8 Z-Algorithm [11 lines] - 3923b6ef

```

vector<int> z_function(string s) {
    int n = s.size();
    vector<int> z(n);
    int l = 0, r = 0;
    for (int i = 1; i < n; i++) {
        if (i < r) z[i] = min(r - i, z[i - 1]);
        while (i + z[i] < n && s[z[i]] == s[i + z[i]])
            z[i]++;
        if (i + z[i] > r) l = i, r = i + z[i];
    }
    return z;
}

```

## 10 Random

### 10.1 Combinatorics

- $\sum_{k=0}^n \binom{n-k}{k} = Fib_{n+1}$
- $\binom{n}{k} + \binom{n}{k+1} = \binom{n+1}{k+1}$
- $k\binom{n}{k} = n\binom{n-1}{k-1}$
- Number of binary sequences of length n such that no two 0's are adjacent =  $Fib_{n+1}$
- Number of non-negative solution of  $x_1 + x_2 + x_3 + \dots + x_k = n$  is  $\binom{n+k-1}{n}$

#### 10.1.1 Catalan Number

- $C_n = \frac{1}{n+1} \binom{2n}{n} = \binom{2n}{n} - \binom{2n}{n+1} = \frac{(2n)!}{(n+1)!n!}$
- $C_0 = 1, C_1 = 1, C_n = \sum_{k=0}^{n-1} C_k C_{n-1-k}$
- 1, 1, 2, 5, 14, 42, 132, 429, 1430, 4862, 16796, 58786
- Number of correct bracket sequences consisting of n opening brackets.
- Number of ways to completely parenthesize  $n+1$  factors.

- The number of triangulations of a convex polygon with  $+2$  sides (i.e. the number of partitions of polygon into disjoint triangles by using the diagonals).
- The number of ways to connect the  $2n$  points on a circle to form  $n$  disjoint i.e. non-intersecting chords.
- The number of monotonic lattice paths from point  $(0,0)$  to point  $(n,n)$  in a square lattice of size  $n \times n$ , which do not pass above the main diagonal
- Number of permutation of length  $n$  that can be stack sorted.
- The number of non-crossing partitions of a set of  $n$  elements.
- The number of rooted full binary tree with  $n+1$  leaves.
- The number of Dyck words of length  $2n$ . A string consisting of  $n$  X's and  $n$  Y's such that no string prefix has more Y's than X's.
- Number of permutation of length  $n$  with no three-term increasing subsequence.
- Number of ways to tile a staircase shape of height  $n$  with  $n$  rectangle.
- $C_n^k = \frac{k+1}{n+1} \binom{2n-k}{n-k}$  denote the number of bracket sequences of size  $2n$  with the first  $k$  elements being (.
- $N(n, k) = \frac{1}{n} \binom{n}{k} \binom{n}{k-1}$
- The number of expressions containing  $n$  pairs of correct parentheses, which contain  $k$  distinct nestings.  
 $N(4, 2) = 6$   
 $(((())), ((())(), ((()()), (((()), ((())()$
- The number of paths from  $(0,0)$  to  $(2n, 0)$  with steps only northeast and southeast, not staying below the x-axis with  $k$  peaks. And sum of all number of peaks is Catalan number.

#### 10.1.2 Stirling Number of the First Kind

- Count permutation according to their number of cycles.
- $S(n, k)$  count the number of permutation of  $n$  elements with  $k$  disjoint cycles.
- $S(n, k) = (n-1) \times S(n-1, k) + S(n-1, k-1), S(0, 0) = 1, S(n, 0) = S(0, n) = 0$
- $S(n, 1) = (n-1)!$
- $S(n, n-1) = \binom{n}{2}$
- $\sum_{k=0}^n S(n, k) = n!$

#### 10.1.3 Stirling Numbers of the Second Kind

- Number of ways to partition a set of  $n$  objects into  $k$  non-empty subsets.
- $S(n, k) = k * S(n-1, k) + S(n-1, k-1), S(0, 0) = 1, S(n, 0) = S(0, n) = 0$
- $S(n, 2) = 2^{n-1} - 1$
- $S(n, k) = \frac{1}{k!} \sum_{j=0}^k (-1)^{k-j} \binom{k}{j} j^n$
- $S(n, k) * k! =$  number of ways to color  $n$  nodes using colors from 1 to  $k$  such that each color is used at least once.

#### 10.1.4 Bell Number

- Counts the number of partitions of a set.
- $B_{n+1} = \sum_{k=0}^n \binom{n}{k} * B_k$
- $B_n = \sum_{k=0}^n S(n, k)$ , where  $S$  is Stirling number of second kind.
- The number of multiplicative partitions of a square free number with  $i$  prime factors is the  $i$ -th Bell number.
- $B(p^m + n) \equiv mB(n) + B(n+1) \pmod{p}$
- If a deck is shuffled by removing and reinserting the top card  $n$  times, there are  $n^n$  possible shuffles. The number of shuffles that return the deck to its original order is  $B_n$ , so the probability of returning to the original order is  $B_n/n^n$ .

#### 10.1.5 Lucas Theorem

- If  $p$  is prime then  $\binom{p^a}{k} \equiv 0 \pmod{p}$
- For non-negative integers  $m$  and  $n$  and a prime  $p$ :  
 $\binom{m}{n} = \prod_{i=0}^k \binom{m_i}{n_i} \pmod{p}$  where  
 $m = m_k p^k + m_{k-1} p^{k-1} + \dots + m_1 p + m_0$   $n = n_k p^k + n_{k-1} p^{k-1} + \dots + n_1 p + n_0$  are the base  $p$  expansion.

#### 10.1.6 Derangement

- A permutation such that no element appears in its original position.
- $d(n) = (n-1) * (d(n-1) + d(n-2)), d(0) = 1, d(1) = 0$
- $d(n) = nd(n-1) + (-1)^n = \lfloor \frac{n!}{e} \rfloor, n \geq 1$

### 10.1.7 Burnside Lemma

Given a group G of symmetries and a set X, the number of elements of X up to symmetry equals

$$\frac{1}{|G|} \sum_{g \in G} |X^g|$$

where  $X^g$  are the elements fixed by  $g(g.x = x)$ . If f(n) counts "configurations" of some sort of length n, we can ignore rotational symmetry using  $G = \mathbb{Z}_n$  to get

$$g(n) = \frac{1}{n} \sum_{k=0}^{n-1} f(\gcd(n, k)) = \frac{1}{n} \sum_{k|n} f(k)\phi(n/k)$$

### 10.1.8 Eulerian Number

- $E(n, k)$  is the number of permutations of the numbers 1 to n in which exactly k elements are greater than the previous element.
- $E(n, k) = (n - k)E(n - 1, k - 1) + (k + 1)E(n - 1, k)$ ,  $E(n, 0) = E(n, n - 1) = 1$
- $E(n, k) = \sum_{j=0}^k (-1)^j \binom{n+1}{j} (k + 1 - j)^n$
- $E(n, k) = E(n, n - 1 - k)$
- $E(0, k) = [k = 0]$
- $E(n, 1) = 2^n - n - 1$

## 10.2 Number Theory

### 10.2.1 Möbius Function and Inversion

- define  $\mu(n)$  as the sum of the primitive nth roots of unity depending on the factorization of n into prime factors:

$$\mu(x) = \begin{cases} 0 & \text{n is not square free} \\ 1 & \text{n has even number of prime factors} \\ -1 & \text{n has odd number of prime factors} \end{cases}$$

- Möbius Inversion:

$$g(n) = \sum_{d|n} f(d) \leftrightarrow f(n) = \sum_{d|n} \mu(d)g(n/d)$$

$$\bullet \sum_{d|n} \mu(d) = [n = 1]$$

$$\bullet \phi(n) = \sum_{d|n} \mu(d) \cdot \frac{n}{d} = n \sum_{d|n} \frac{\mu(d)}{d} = \sum_{d|n} d \cdot \mu\left(\frac{n}{d}\right)$$

$$\bullet a|b \rightarrow \phi(a)|\phi(b)$$

- $\phi(mn) = \phi(m).\phi(n) \cdot \frac{d}{\phi(d)}$  where  $d = \gcd(m, n)$
- $\phi(n^m) = n^{m-1}\phi(n)$
- $\sum_{i=1}^n [\gcd(i, n) = k] = \phi\left(\frac{n}{k}\right)$
- $\sum_{i=1}^n \gcd(i, n) = \sum_{d|n} d \cdot \phi\left(\frac{n}{d}\right)$
- $\sum_{i=1}^n \frac{1}{\gcd(i, n)} = \sum_{d|n} \frac{1}{d} \cdot \phi\left(\frac{n}{d}\right) = \frac{1}{n} \sum_{d|n} d \cdot \phi(d)$
- $\sum_{i=1}^n \frac{i}{\gcd(i, n)} = \frac{n}{2} \cdot \sum_{d|n} \frac{1}{d} \cdot \phi\left(\frac{n}{d}\right) = \frac{n}{2} \cdot \frac{1}{n} \sum_{d|n} d \cdot \phi(d)$
- $\sum_{i=1}^n \frac{n}{\gcd(i, n)} = 2 \cdot \sum_{i=1}^n \frac{i}{\gcd(i, n)} - 1$

### 10.2.2 GCD and LCM

- $\gcd(a, b) = \gcd(b, a \bmod b)$
- If  $a|b.c$ , and  $\gcd(a, b) = d$ , then  $(a/d)|c$ .
- GCD is a multiplicative function.
- $\gcd(a, \text{lcm}(b, c)) = \text{lcm}(\gcd(a, b), \gcd(a, c))$
- $\gcd(n^a - 1, n^b - 1) = n^{\gcd(a, b)} - 1$

### 10.2.3 Gauss Circle Theorem

- Determine the number of lattice points in a circle centered at the origin with radius r.
- number of pairs (m, n) such that  $m^2 + n^2 \leq r^2$
- $N(r) = 1 + 4 \sum_{i=0}^{\infty} (\lfloor \frac{r^2}{4i+1} \rfloor - \lfloor \frac{r^2}{4i+3} \rfloor)$

### 10.2.4 Pick's Theorem

According to Pick's Theorem We can calculate the area of any polygon by just counting the number of Interior and Boundary lattice points of that polygon. If number of interior points are I and number of boundary lattice points are B then Area (A) of polygon will be:

$$Area = I + B/2 - 1$$

where I is the number of points in the interior shape, B stands for the number of points on the boundary of the shape.

### 10.2.5 Formula Cheatsheet

- $\sum_{i=1}^n = \frac{1}{m+1}[(n+1)^{m+1} - 1 - \sum_{i=1}^n ((i+1)^{m+1} - i^{m+1}) - (m+1)i^m]$
- $\sum_{i=0}^n c^i = \frac{c^{n+1}-1}{c-1}, c \neq 1$
- $\sum_{i=0}^{\infty} c^i = \frac{1}{1-c}, \sum_{i=1}^{\infty} c^i = \frac{c}{1-c}, |c| < 1$
- $H_n = \sum_{i=1}^n \frac{1}{n}, \sum_{i=1}^n iH_i = \frac{n(n+1)}{2} H_n - \frac{n(n-1)}{4}$
- $\sum_{k=0}^n \binom{r+k}{k} = \binom{r+n+1}{n}$
